

VIVEK CHINMAY DHANWADA

Carlingford, NSW | +61 492 911 031 | vivekchinmay@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Personal Summary

Data Analyst with experience translating operational and commercial data into decisions across energy markets, transport, sustainability, and sports analytics. Microsoft Certified: Power BI Data Analyst Associate; proficient in Python, SQL, Power BI, Tableau, and Excel, demonstrated through large-scale analytical projects and automated reporting workflows.

Skills

- **Programming & Scripting:** Python, R
- **Database and Querying:** SQL, PostgreSQL
- **Analytics & BI:** Power BI, DAX, Power Query, Tableau, Excel, Google Analytics 4
- **Tools & Integration:** GitHub, REST APIs
- **Core Competencies:** Business Analysis, Data Modelling, Stakeholder Reporting, Dashboard Development, Data Quality & Validation, AI-Assisted Workflows, Process Improvement

Certifications

- Microsoft Certified: Power BI Data Analyst Associate: Microsoft · June 2026

Experience

Green The Chain

Business Analytics & Development Intern

Sydney, Australia · Mar 2025 - Oct 2025

- Built an automated GA4 dashboard in Google Sheets with week-on-week comparisons across traffic KPIs by channel; adopted by the founding team as their primary performance monitoring tool.
- Implemented UTM tracking across LinkedIn, Slack, and email campaigns, closing a source-tracking gap; website traffic doubled week-on-week with Slack identified as the highest-performing channel.
- Compiled a prioritised tracker of 50+ ESG suppliers across company aggregators and sustainability portals, becoming the team's primary outreach tool and reducing manual research time.

Climate Action Foundation Ltd

Data Management Volunteer

Sydney, Australia · Jan 2025 - Mar 2025

- Managed backend event data across Notion and Google Sheets for a 12,500+ participant sustainability event, cleaning and validating 500+ session records to ensure accuracy and completeness.
- Analysed session records to identify redundancies and coverage gaps across the event programme, directly informing schedule restructuring decisions.

AIESEC

National Business Development Consultant

Hyderabad, India · Feb 2021 - Jan 2022

- Reviewed bi-weekly performance data from 6 BD Heads to identify execution gaps against national targets, realigning local committee activity with national BD goals.
- Presented pipeline and performance analysis to national leadership, translating multi-city data into planning recommendations that restructured BD target allocation across the network.

Business Development Manager → Head of Business Development

Hyderabad, India · Jan 2019 - Jan 2021

- Built CRM tracking systems and dashboards monitoring revenue, ticket sales, and sponsorship performance across 30 chapters, leading the BD department to a top 5 national ranking and BD Excellence Award nomination.
- Analysed post-event attendance and engagement data for 1,000+ participant events, identifying virtual platforms and education as highest-performing segments and refocusing outreach strategy for subsequent events.

Projects

Spain at Euro 2024 - Tactical Analysis [View Project](#)

Python, Tableau | StatsBomb Open Data

- Extracted and processed 3,000+ events per match across 51 match files via StatsBomb Python API, building a ranking system that identified Spain as #1 in goals, pressures, and ball recoveries across all 24 Euro 2024 teams.
- Identified that goals came from 10 different scorers and possession was driven by defenders and midfielders rather than a striker, revealing Spain's system-based approach as the foundation of their winning model.

NSW Opal Card Tap-On/Tap-Off Analysis [View Project](#)

PostgreSQL, Tableau | Transport for NSW Open Data

- Ingested 398,019 NSW transport records into PostgreSQL and engineered a unified schema using CTEs, window functions, and multi-table joins, enabling direct comparison of travel behaviour across a standard and holiday week.
- Analysed peak demand patterns across both periods, finding morning commuter demand collapsed 80% and the weekday/weekend ratio compressed from 5.6x to 2.6x. Ferry was the only mode to grow (+66%) while train and bus fell sharply, signalling a structural shift from commuter to leisure travel.
- Identified a structural data quality issue across 22,425 rows (~13% missing tap direction values), documenting the methodological decision to retain affected rows for volume analysis while excluding them from directional analysis.

Australian National Electricity Market - Emissions & Bidding Analysis [View Project](#)

Python | Macquarie University

- Extracted and processed 5-minute interval NEM emissions data across 2019 and 2025 dispatch periods via CSIRO API using Python, identifying NSW's 21.7% carbon intensity reduction against a 7.7% national average as evidence of faster decarbonisation than the national grid.
- Analysed how NSW emissions patterns changed across times of day between 2019 and 2025, finding evening emissions fell more sharply than daytime, evidence that renewable energy and battery storage are now operating beyond peak solar hours.
- Modelled generator bidding behaviour across 2019 and 2025 AEMO dispatch data, finding fossil bid IQR widened from \$85/MWh to \$210/MWh, quantifying fossil generators repositioning as flexible peaking capacity as renewable penetration increases.

Australian Population & Migration Trends Analysis [View Project](#)

Power BI, Excel | Macquarie University

- Analysed 20 years of ABS census data across three interactive Power BI dashboards, identifying the 50-74 age cohort as the fastest-growing population group and surfacing a structural ageing trend with direct implications for aged care and workforce planning.
- Identified Nepal as the fastest-growing migrant group with a 2,330% increase from 2001-2016, a pattern invisible in national averages that directly informs multicultural service planning for emerging communities.

Education

Macquarie University

Master of Business Analytics

Jul 2023 - Jul 2025

Sydney, Australia

- **Achievements:** Capstone project awarded Distinction, analysing Australian National Electricity Market data to identify emissions trends, generator bidding behaviour, and pricing insights across a 1.6M+ row dataset.
- **Coursework:** WAM: 70.13, Data Visualisation, Statistical Analysis, Python Programming, Power BI, SQL, Tableau, R Programming, Machine Learning, Project Management

Jawaharlal Nehru Technological University Hyderabad

Bachelor of Technology, Mechatronics Engineering

Jul 2018 - Jul 2022

Hyderabad, India
