

VIVEK CHINMAY DHANWADA

Carlingford, NSW | +61 492 911 031 | vivekchinmay@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Personal Summary

Business Analytics graduate with an engineering foundation, focused on building analytical work that leads to decisions, not just reports. Experienced across commercial and cross-functional environments in data analysis, dashboard development, and stakeholder reporting, with experience working across real-world datasets, business metrics, and operational data. Skilled in Python, SQL, Power BI, Tableau, and Excel.

Projects

Australian National Electricity Market - Emissions & Bidding Analysis

Macquarie University

- Analysed 6 years of 5-minute interval NEM emissions data via CSIRO API using Python, identifying NSW achieved a 21.7% reduction in carbon intensity against a 7.7% national average, visualised through regional time series and intra-daily trend charts.
- Modelled generator bidding behaviour across 2019 and 2025 AEMO dispatch data, finding fossil generators shifted from baseload providers to strategic peak-pricers with fossil bid IQR widening from \$85/MWh to \$210/MWh, contributing to a Distinction-graded client-style report with investment recommendations.

Australian Population & Migration Trends Analysis

Macquarie University

- Analysed 20 years of ABS census data across three interactive Power BI dashboards covering national population growth, country-of-birth composition, and fastest-growing migrant communities by state and gender.
- Identified Nepal as the fastest-growing migrant group with a 2,330% increase from 2001–2016, surfacing emerging migration patterns not visible in top-line summaries and highlighting implications for policy and community planning.

NSW Opal Card Tap-On/Tap-Off Analysis

Transport for NSW Open Data

- Loaded 398,019 records of real NSW government transport data into PostgreSQL across two contrasting periods, designing a unified schema to enable direct comparison of travel behaviour between a standard and holiday week.
- Analysed peak demand by mode and 15-minute interval, seasonal demand shifts, service disruption patterns from operational alerts data, and demand concentration by location using CTEs, window functions, and multi-table joins.
- Identified a structural data quality issue in the December dataset (22,425 rows, ~13% missing tap direction values), documenting the methodological decision to retain affected rows for volume analysis while excluding them from directional analysis.

Skills

- **Technical Skills:** Python, SQL, Power BI, Excel, Tableau, R, Google Analytics 4, GitHub
- **Business & Professional Skills:** Dashboard Development, Data Visualisation, Business Analysis, Stakeholder Reporting, Data Storytelling, KPI Reporting, Data Cleaning & Validation

Experience

Green The Chain

Business Analytics & Development Intern

Sydney, Australia · Mar 2025 - Oct 2025

- Built a weekly traffic analysis dashboard in Google Sheets consolidating GA4 KPI data by traffic source, including users, sessions, engagement rate, and signup rate, with week-on-week charts used by the founding team to monitor performance trends and support commercial decisions.
- Set up and implemented UTM tracking across LinkedIn, Slack, and cold email outreach campaigns, resolving a source-tracking gap that had prevented the team from measuring campaign performance by channel.
- Conducted market research to identify and prioritise 50+ high-value suppliers across ESG product categories, with findings used to focus outreach efforts.
- Mapped the supplier onboarding journey end-to-end using a test profile, identifying pain points in the customer experience and contributing recommendations that simplified the onboarding process.

Climate Action Foundation Ltd

Event & Project Management Volunteer

Sydney, Australia · Jan 2025 - Mar 2025

- Managed backend event data across Notion and Google Sheets for a 12,500+ participant sustainability event, cleaning and validating 500+ session records to ensure accuracy and completeness.
- Analysed event outlines to identify redundancies and support programme restructuring decisions across the event schedule.

AIESEC

National Business Development Consultant

Hyderabad, India · Feb 2021 - Jan 2022

- Conducted bi-weekly performance reviews with BD Heads across six cities, analysing pipeline activity, client engagement, and event performance to identify gaps and support local committee decision-making.
- Presented pipeline and performance analysis to national leadership stakeholders, supporting planning and performance decisions across the BD network.

Business Development Manager → Head of Business Development

Hyderabad, India · Jan 2019 - Jan 2021

- Built Google Sheets dashboards from scratch to track partnership outreach, CRM activity, team performance, event attendance, and revenue, enabling planning and operational decisions that earned the department a nomination for the national BD Excellence Award.
- Supported delivery of events with 1,000+ participants across planning, logistics, partnership delivery, and data management, analysing attendance and engagement data post-event to inform future programme decisions.

Education

Macquarie University

Jul 2023 - Jul 2025

Master of Business Analytics

Sydney, Australia

- **Achievements:** Capstone project awarded Distinction, analysing Australian National Electricity Market data to identify emissions trends, generator bidding behaviour, and pricing insights across a 1.6M+ row dataset.
- **Coursework:** WAM: 70.13, Data Visualisation, Statistical Analysis, Python Programming, Power BI, SQL, Tableau, R Programming, Machine Learning, Project Management

Jawaharlal Nehru Technological University Hyderabad

Jul 2018 - Jul 2022

Bachelor of Technology, Mechatronics Engineering

Hyderabad, India
