

VIVEK CHINMAY DHANWADA

Carlingford, NSW | +61 492 911 031 | vivekchinmay@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Personal Summary

I work across the full data lifecycle, from building automated cloud pipelines with data transformation and modelling to the reporting and dashboards that drive business decisions. Microsoft Certified: Fabric Analytics Engineer Associate.

Skills

- **Programming & Querying:** SQL, Python, R
- **Databases & Warehousing:** Snowflake, BigQuery, Microsoft Fabric, PostgreSQL, Lakehouse Architecture
- **Data Modelling & Testing:** dbt, Dimensional Modelling, Star Schema, Data Quality Testing, GitHub Actions (CI)
- **ETL & Ingestion:** AWS (Lambda, S3, EventBridge), Snowpipe, API-based Ingestion, Fabric Data Pipelines
- **Analytics & BI:** Power BI, DAX, Power Query, Tableau, Excel, Google Analytics 4, Streamlit
- **Tools & Integration:** GitHub, AI-Assisted Development (Claude Code, Codex)

Experience

Freelance

Data Analyst

Remote • Jul 2026 - Present

- Providing remote data and analytics consulting for a material handling equipment business in Hyderabad, auditing current digital infrastructure and scoping a phased roadmap across website analytics, inventory systems, and workforce reporting.

Green The Chain

Business Analytics & Development Intern

Sydney, Australia • Mar 2025 - Oct 2025

- Built an automated GA4 reporting system in Google Sheets, modelling raw data into KPI and traffic-source tables with week-on-week visualisations and weekly scheduled refreshes; adopted by the founding team as their primary performance monitoring tool.
- Built a consistent UTM tracking framework across LinkedIn, Slack, and email campaigns to close a source-attribution gap, surfacing Slack as the highest-performing channel as measured traffic doubled week-on-week.
- Built a structured, prioritised dataset of 50+ ESG suppliers across multiple sourcing platforms, consolidating fragmented research into the team's primary outreach tool.

Unison Label

Sales Assistant

Sydney, Australia • Nov 2024 - Apr 2026

- Analysed and reported sales performance, trade results, and budget vs. actual metrics to the State Manager and Visual Merchandising teams, informing floor operations planning and store trading decisions.
- Personally fulfilled more than 50% of online orders during peak trading periods as the outlet ranked NSW/ACT's highest-volume online fulfilment location.
- Managed floor operations and online order fulfilment during periods of full store supervision.

Climate Action Foundation Ltd

Data Management Volunteer

Sydney, Australia • Jan 2025 - Mar 2025

- Managed data cleaning and integrity for 500+ session records across Notion and Google Sheets for a 12,500+ participant sustainability event, deduplicating entries, standardising formatting, and flagging missing data to surface coverage gaps that directly informed schedule restructuring decisions.

AIIESEC

National Business Development Consultant

Hyderabad, India • Feb 2021 - Jan 2022

- Reviewed bi-weekly performance data and consulted with 6 city-level Business Development Heads to align local activity with national targets, while presenting performance findings to national leadership.

Head of Business Development

Hyderabad, India • Jan 2020 - Jan 2021

- Built data tracking systems and dashboards monitoring CRM, revenue, and member performance for the local BD department, leading the team to a top 5 ranking among 30 BD departments nationally and a BD Excellence Award nomination.
- Analysed historical event, sector, and market data to curate the department's annual strategic plan around high-potential partnership, sponsorship, and outreach opportunities.

Certifications and Badges

- Microsoft Certified: Fabric Analytics Engineer Associate: Microsoft - August 2026
- Microsoft Certified: Power BI Data Analyst Associate: Microsoft - June 2026
- Snowflake Data Ingestion, Transformation & Delivery, and Declarative Data Pipelines with Dynamic Tables: Snowflake - July 2026

Projects

Retail Promotion and Churn Analysis [View Project](#)

BigQuery, dbt, Power BI

Portfolio Project

- Ingested 8 source tables (including a 36.8M-row causal_data table and a 2.6M-row transaction_data table) into BigQuery via a Python pipeline with schema validation, null profiling, and duplicate-key detection, then built dbt staging, intermediate, and mart models using CTEs, window functions, and multi-table joins.
- Delivered a two-page Power BI dashboard translating promotion and churn analysis into a budget reallocation recommendation, built on a pipeline with automated data quality testing and CI validation on every push.
- Found coupon-redeemed transactions averaged more than double the basket value of non-promoted transactions, while churned and active customers received near-identical promotional coverage, indicating promotion exposure alone did not explain churn.

Spotify Snowflake Pipeline [View Project](#)

Python, SQL, AWS, Snowflake

Portfolio Project

- Built a fully automated ETL pipeline (Spotify API → AWS Lambda → S3 → Snowpipe → Snowflake), verified via a live triggered run confirming data updated automatically across all tables with zero manual intervention.
- Established secure AWS-Snowflake integration via IAM role-based trust, avoiding long-lived stored credentials.
- Identified and permanently resolved a data-quality issue from Snowflake's append-only ingestion model (duplicate records) using self-correcting database views, eliminating manual cleanup.

NSW Opal Card Tap-On/Tap-Off Analysis [View Project](#)

SQL, PostgreSQL, Tableau | Transport for NSW Open Data

Portfolio Project

- Ingested 398,019 NSW transport records into PostgreSQL and engineered a unified schema using CTEs, window functions, and multi-table joins, enabling direct comparison of travel behaviour across a standard and holiday week.
- Morning commuter demand collapsed 80% and weekday/weekend ratio compressed from 5.6x to 2.6x; ferry was the only mode to grow (+66%) while train and bus fell sharply.
- Identified a structural data quality issue across 22,425 rows (~13% missing tap direction values), documenting the methodological decision to retain affected rows for volume analysis while excluding them from directional analysis.

Education

Macquarie University

Jul 2023 - Jul 2025

Master of Business Analytics

Sydney, Australia

- **Achievements:** Capstone project awarded Distinction, analysing Australian National Electricity Market data to identify emissions trends, generator bidding behaviour, and pricing insights across a 1.6M+ row dataset.
- **Coursework:** WAM: 70.13, Data Visualisation, Statistical Analysis, Python Programming, Power BI, SQL, Tableau, R Programming, Machine Learning, Project Management

Jawaharlal Nehru Technological University Hyderabad

Jul 2018 - Jul 2022

Bachelor of Technology, Mechatronics Engineering

Hyderabad, India
