

VIVEK CHINMAY DHANWADA

Carlingford, NSW | +61 492 911 031 | vivekchinmay@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Personal Summary

Business Analytics graduate with an engineering foundation, focused on building analytical work that leads to decisions, not just reports. Brings experience translating data into business and operational decisions through commercial analysis and automated dashboards, analysing large datasets across energy markets, transport, sustainability, and sports analytics. Skilled in Python, SQL, Power BI, Tableau, and Excel.

Projects

Spain at Euro 2024 - Tactical Analysis [View Project](#)

Python, Tableau | StatsBomb Open Data

- Analysed Spain's UEFA Euro 2024 campaign across 7 matches using StatsBomb open event data accessed via raw API calls in Python, processing 3,000+ events per match to examine shot creation, pressing behaviour, and passing network structure.
- Ranked Spain #1 in goals, pressures, and ball recoveries across all 24 Euro 2024 teams by aggregating 51 match files; built interactive Tableau dashboards revealing goals from 10 different scorers and a possession structure driven by defenders and midfielders rather than a traditional striker.

Australian National Electricity Market - Emissions & Bidding Analysis [View Project](#)

Python | Macquarie University

- Analysed 5-minute interval NEM emissions data across 2019 and 2025 dispatch periods via CSIRO API using Python, finding NSW achieved a 21.7% reduction in carbon intensity against a 7.7% national average. Intra-day analysis showed NSW's evening emissions dropping more sharply in recent years, pointing to improved renewable and storage integration extending beyond daytime hours.
- Modelled generator bidding behaviour across 2019 and 2025 AEMO dispatch data, finding fossil generators shifted from steady baseload pricing toward strategic peak-period bidding, with fossil bid IQR widening from \$85/MWh to \$210/MWh, evidence of fossil generators repositioning as flexible peaking capacity as renewable penetration increases.

NSW Opal Card Tap-On/Tap-Off Analysis [View Project](#)

PostgreSQL, Tableau | Transport for NSW Open Data

- Loaded 398,019 records of NSW transport data into PostgreSQL across two contrasting periods, designing a unified schema and using CTEs, window functions, and multi-table joins to enable direct comparison of travel behaviour between a standard and holiday week.
- Compared peak demand patterns between standard and holiday weeks, finding morning peak demand collapsed 80% in the holiday period while weekend travel held steady, compressing the weekday/weekend demand ratio from 5.6x to 2.6x and signalling a structural shift from commuter to leisure travel patterns, with ferry the only mode to grow (+66%) as train and bus usage fell sharply.
- Identified a structural data quality issue in the December dataset (22,425 rows, ~13% missing tap direction values), documenting the methodological decision to retain affected rows for volume analysis while excluding them from directional analysis.

Australian Population & Migration Trends Analysis [View Project](#)

Power BI, Excel | Macquarie University

- Analysed 20 years of ABS census data across three interactive Power BI dashboards, finding the population's 50-74 age cohort grew significantly faster than younger groups, a structural ageing trend with direct implications for aged care and workforce planning.
- Identified Nepal as the fastest-growing migrant group with a 2,330% increase from 2001-2016 against a top-10-country view, a pattern invisible in national averages but relevant to multicultural service planning for emerging communities.

Skills

- Technical Skills:** Python, SQL, Power BI, Tableau, Excel, R, Google Analytics 4, GitHub
- Business & Professional Skills:** Dashboard Development, Business Analysis, Stakeholder Reporting, Trend & Pattern Analysis, Data Quality Assessment, Process Mapping, AI-Assisted Workflows

Experience

Green The Chain | *Business Analytics & Development Intern*

Mar 2025 - Oct 2025

- Built a weekly automated GA4 traffic dashboard in Google Sheets using the GA4 Sheets extension, configuring auto-refreshing data pulls and week-on-week comparisons across traffic KPIs by channel, adopted by the founding team as their primary tool for monitoring performance trends and supporting commercial decisions.
- Independently implemented UTM tracking across LinkedIn, Slack, and email outreach campaigns, closing a source-tracking gap that had prevented the team from measuring channel performance - website traffic doubled week-on-week following implementation, with Slack identified as the highest-performing channel.
- Researched and compiled a prioritised tracker of 50+ ESG suppliers across multiple sources, enabling the founding team to focus outreach efforts and onboard 2-3 new suppliers.
- Mapped the supplier onboarding journey by completing the full process as a test profile, identifying friction points that led the founding team to directly redesign the onboarding form; separately trained a GPT assistant to guide suppliers through ESG compliance questions with document requirements and answer templates.

Climate Action Foundation Ltd | Event & Project Management Volunteer **Jan 2025 - Mar 2025**

- Managed backend event data across Notion and Google Sheets for a 12,500+ participant sustainability event, cleaning and validating 500+ session records to ensure accuracy and completeness.
- Analysed event outlines to identify redundancies and support programme restructuring decisions across the event schedule.

AIESEC | National Business Development Consultant **Feb 2021 - Jan 2022**

- Reviewed bi-weekly performance data from BD Heads across six cities to identify execution gaps against national targets, cascading guidance to realign local committee activity with national BD goals.
- Presented pipeline and performance analysis to national leadership, translating multi-city performance data into planning recommendations adopted across the BD network.

Business Development Manager → Head of Business Development **Jan 2019 - Jan 2021**

- Led the BD department to a top 5 national ranking across 30 chapters and a nomination for the national BD Excellence Award, building partnership and CRM data tracking systems and dashboards to monitor revenue, ticket sales, and sponsorship performance.
- Delivered events with 1,000+ participants, analysing post-event attendance and engagement data to identify highest-performing sponsor industries and attendee markets, with findings directly shaping outreach strategy for subsequent events and streamlining partner and attendee acquisition.

Education

Macquarie University **Jul 2023 - Jul 2025**

Master of Business Analytics, Business Analytics *Sydney, Australia*

- **Achievements:** Capstone project awarded Distinction, analysing Australian National Electricity Market data to identify emissions trends, generator bidding behaviour, and pricing insights across a 1.6M+ row dataset.
- **Coursework:** WAM: 70.13, Data Visualisation, Statistical Analysis, Python Programming, Power BI, SQL, Tableau, R Programming, Machine Learning, Project Management

Jawaharlal Nehru Technological University Hyderabad **Jul 2018 - Jul 2022**

Bachelor of Technology, Mechatronics Engineering *Hyderabad, India*
