Personal Summary

Data Analyst skilled in building cloud data pipelines, tested data models, dashboards and tracking that inform business decisions. My work has spanned a startup, retail, industrial services and a global nonprofit, where I have delivered analysis, reporting and performance monitoring used across planning and operations.

Experience

Freelance

Data Analyst — *Remote* · **Jul 2026 - Present**

- Building website analytics for a material handling equipment business in Hyderabad, implementing GA4 and Google Tag Manager tracking following an initial digital infrastructure audit, including cleaning and structuring existing site and business data for analysis.
- Mapping a phased analytics roadmap across inventory management and workforce reporting to extend tracking beyond the website into core business operations.

Green The Chain

Business Analytics & Development Intern — *Sydney, Australia* · **Mar 2025 - Oct 2025**

- Built an automated GA4 reporting system in Google Sheets, transforming raw data into KPI and traffic-source summaries with week-on-week visualisations and weekly scheduled refreshes; adopted by the founding team as their primary performance monitoring tool.
- Built a consistent UTM tracking framework across LinkedIn, Slack, and email campaigns to close a source-attribution gap, identifying Slack as the highest-performing channel.
- Built a structured, prioritised tracker of 50+ ESG suppliers across multiple sourcing platforms, consolidating fragmented research into the team's primary outreach tool.

Unison Label

Sales Assistant — *Sydney, Australia* · **Nov 2024 - Apr 2026**

- Analysed sales performance, trade results and budget vs. actual metrics for the State Manager and Visual Merchandising teams, informing floor operations, planning and trading decisions.
- Fulfilled more than 50% of online orders during peak trading periods as the outlet ranked NSW/ACT's highest-volume online fulfilment location.
- Managed floor operations and online order fulfilment during periods of full store supervision.

AIESEC

National Business Development Consultant — *Hyderabad, India* · **Feb 2021 - Jan 2022**

- Reviewed bi-weekly performance data and consulted with 6 city-level Business Development Heads to align local activity with national targets, while presenting performance findings to national leadership.

Head of Business Development — *Hyderabad, India* · **Feb 2020 - Jan 2021**

- Built data tracking systems and dashboards monitoring CRM, revenue, and member performance for the local BD department, leading the team to a top 5 ranking among 30 BD departments nationally and a BD Excellence Award nomination.
- Analysed historical event, sector, and market data to curate the department's annual strategic plan around high-potential partnership, sponsorship, and outreach opportunities.

Skills

- **Analytics & BI**: Advanced Excel (Pivot Tables, VLOOKUP), Power BI (DAX, Power Query), Looker Studio, Tableau, Streamlit
- **Programming & Querying**: SQL, Python, R
- **ETL & Ingestion**: AWS (Lambda, S3, EventBridge), Snowpipe, API-based Ingestion
- **Databases & Warehousing**: Snowflake, BigQuery, Microsoft Fabric, PostgreSQL, Lakehouse Architecture
- **Data Modelling & Testing**: dbt, Dimensional Modelling, Star Schema, Data Quality Testing, GitHub Actions (CI)
- **Web Analytics & Tracking**: Google Analytics 4, Google Tag Manager, dataLayer, Tracking QA (Playwright)
- **GenAI Tools**: Claude Code, Codex

Projects

Retail Promotion and Churn Analysis View Project

BigQuery, dbt, Power BI — *Portfolio Project*

- Built a BigQuery ELT pipeline ingesting 8 source tables (including a 36.8M-row causal_data table and a 2.6M-row transaction_data table) with schema validation, null profiling and duplicate-key detection, then built dbt staging, intermediate and mart models using CTEs, window functions and multi-table joins.
- Delivered a two-page Power BI dashboard translating promotion and churn analysis into a budget reallocation recommendation, built on a pipeline with automated data quality testing and CI validation on every push.
- Found coupon-redeemed transactions averaged more than double the basket value of non-promoted transactions, while churned and active customers received near-identical promotional coverage, indicating promotion exposure alone did not explain churn.

Spotify Snowflake Pipeline View Project

Python, SQL, AWS, Snowflake — *Portfolio Project*

- Built a fully automated ETL pipeline (Spotify API → AWS Lambda → S3 → Snowpipe → Snowflake), tested end to end to confirm data updated automatically across all tables with zero manual intervention.
- Established secure AWS-Snowflake integration via IAM role-based trust, avoiding long-lived stored credentials.
- Identified and permanently resolved a data-quality issue from Snowflake's append-only ingestion model (duplicate records) using self-correcting database views, eliminating manual cleanup.

Website Tracking and QA View Project

GA4, GTM, dataLayer, Looker Studio, BigQuery, Playwright *Portfolio Project*

- Built 5 custom GA4 events in Google Tag Manager from a written measurement plan and event specification, with the dataLayer script built with GenAI (Claude), enabling resume opens, project clicks and contact clicks to be reported separately.
- Detected a deliberately introduced silent tracking failure in Tag Assistant and DebugView, then automated the check with 18 Playwright tests (written with Claude) across Chromium and WebKit that catch it in under a minute.
- Validated tracking data with a BigQuery SQL check and delivered a two-page Looker Studio report on visitor behaviour and tracking health.

Certifications and Badges

- Microsoft Certified: Power BI Data Analyst Associate: Microsoft - June 2026
- Microsoft Certified: Fabric Analytics Engineer Associate: Microsoft - August 2026
- Snowflake Data Ingestion, Transformation & Delivery: Snowflake - July 2026

Volunteering

Data Management Volunteer **Jan 2025 - Mar 2025**

Climate Action Foundation Ltd *Sydney, Australia*

Managed data cleaning and integrity for 500+ session records across Notion and Google Sheets for a 12,500+ participant sustainability event, deduplicating entries, standardising formatting, and flagging missing data to surface coverage gaps that directly informed schedule restructuring decisions.

Education

Macquarie University **Jul 2023 - Jul 2025**

Master of Business Analytics *Sydney, Australia*

- **Achievements:** Capstone project awarded Distinction, analysing Australian National Electricity Market data to identify emissions trends, generator bidding behaviour, and pricing insights across a 1.6M+ row dataset.
- **Coursework:** WAM: 70.13, Data Visualisation, Statistical Analysis, Python Programming, Power BI, SQL, Tableau, R Programming, Machine Learning, Project Management

Jawaharlal Nehru Technological University Hyderabad **Jul 2018 - Jul 2022**

Bachelor of Technology, Mechatronics Engineering *Hyderabad, India*
